

**MAYAN TREASURE: Space and Time Unified at Teotihuacan  
COMBINED RESEARCH SUMMARY: 1971 – 2006**

**INTRODUCTION**

**Dimensional messages at a known site provide information beyond expectations as new data required a revision of assumptions. These included believing that the speed of light is limited, that ancient world sites are not independent, and that the Mayan design was haphazard and not a long term mathematical plan.**

**Identical numbers are found in Europe and America: in Greece and Mexico, two systems of thought alien to each other, whose architecture was laid out with completely different units of measure. Both incorporate the same six key abstract numbers.**

**This led to modification of beliefs with respect to theoretical capabilities of ancient architects. Mayan counts permit construction of a multi-dimensional matrix that today's units cannot duplicate: a 360-degree Egyptian circle, metric measurements, and Newtonian time seconds per day are limited. Future science can redefine these so as to unify space and time measurements with whole numbers.**

**Perhaps the only group to have linked Jupiter/Saturn sky-counts to mathematical architecture were the Mayans in Mexico. That they achieved this is abundantly documented by their records. Two dozen suggestions herein invite researchers to evaluate this hypothesis.**

**For findings to date please refer to the Abstract and 22 conclusions under Section I; to the Abstract, Summary and 6 conclusions under Section II; and to the Abstract and 5 conclusions under Section III. Correlation of 24-dimensional Touching Numbers appears in Section IV, and a suggested mathematical design base---factorial 9!--- in Section V, as well as twelve additional conclusions.**
